Web Vulnerability Scan Report

Target URL	https://youtube.com
Scan Date	2026-02-12 22:40:10
Security Score	69.0 / 100
Risk Level	Low
Vulnerabilities Found	4

Executive Summary

Security scan of target identified 4 security issues. The most severe findings require immediate attention to prevent potential exploitation.

Risk Assessment

Found 4 vulnerabilities with Low overall risk level.

Vulnerabilities Found

1. SSL Check Error - Low Severity

Description	Error checking SSL: unconverted data remains: GMT
Severity	Low
Remediation	Verify server configuration

2. Weak Security Header - Medium Severity

Description	X-XSS-Protection: Weak value "0". Should be "1; mode=block"

Severity	Medium
Remediation	Add X-XSS-Protection header with value "1; mode=block"

3. Missing Security Header - Low Severity

Description	Referrer-Policy header is missing. Controls how much referrer information is sent
Severity	Low
Remediation	Add Referrer-Policy header with appropriate value (e.g., strict-origin-when-cross-origin)

4. SQL Injection - Critical Severity

Description	Potential SQL injection in parameter "page"
Severity	Critical
Remediation	Use parameterized queries for parameter "page", implement input validation

Recommendations

1. Use parameterized queries and input validation to prevent SQL injection

2. Obtain and configure valid SSL/TLS certificates

3. Configure security headers on the web server

4. Conduct regular security audits and penetration testing

5. Keep all software and dependencies up to date
